Developer (Java/Appium)

Role Profile

Location: Gurgaon

Reports To: CFO

Full-Time Role

Responsibilities

We are looking for a developer to join our product development team in our dynamic Gurgaon office.

- Understand and question business requirements
- Contribute to the technical design
- Implement design using TDD and best practices
- Provide support for quality assurance testing and defect resolution
- Prepare and package production-ready code modules for staging
- Provide support to Provar's internal Regression, Customer Success and Consulting teams.
- Provide support to external customers
- Participate in product team meetings and communicate effectively with peers, architects and across other technology team boundaries, reporting product status as required
- Become a product expert in Provar
- Build strong skill sets and add value as a technical expert for various applications
- Study upcoming tools and technologies and use them to improve existing solutions and processes.
- Learn Salesforce and complete the Salesforce Admin examinations

Skills required

- 3+ years Core Java
- 1+ years Appium with XCUITest and UIAutomator/2 drivers
- Experience of working in small and large teams with Requirements, Design and Development phases and complex implementations
- Willingness and aptitude to learn new skills in a rapidly changing environment
- Excellent communication skills (Oral, written and presentation), organizational and collaboration skills

Skills preferred

- Knowledge of CRM solutions, preferably Salesforce.com
- Angular / Typescript
- NodeJS
- Knowledge of Grunt or Gulp
- Experience of TDD or BDD development cycle
- The candidate must have strong visual design skills and be able to provide real-world examples which demonstrate these skills
